TEAM NELSON EARTHWORK & UTILITIES

Despite an unusual beginning, this Seattle-area firm has become an industry leader.

Don Nelson, President
MESSAGE FROM THE PRESIDENT

Dear Valued Customer:

High production and efficiency are your goals, and Komatsu shares those goals. That’s why it continues to manufacture quality products that meet or exceed emissions standards while maintaining, or even boosting, your production and efficiency.

In this issue of your Modern Machinery Update magazine, you can read about innovative Komatsu products that raise the bar when it comes to increasing your uptime and material movement, while lowering your owning and operating costs. At its recent Demo Days, Komatsu introduced its new intelligent Machine Control (iMC) PC490LCi-11 excavator. It is the world’s largest excavator with integrated control function and was modeled after Komatsu’s iMC PC210LCi-10 excavator, which was the first of its kind. More about the PC490LCi-11 will be released soon.

Komatsu introduced the PC210LCi-10 early last year. It followed several models of iMC dozers that Komatsu began rolling out a few years ago, which feature factory-integrated GPS technology that gives operators automatic blade control from rough-cut to finish grade. You can read about the most recent iMC dozer, the D39i-24, in this issue, along with articles on the new PC30MR-5 and PC35MR-5 excavators and the 931 harvester, the flagship machine of Komatsu’s new forestry family.

All Tier 4 Final construction-sized machines are backed by Komatsu CARE, which covers scheduled maintenance for the first three years or 2,000 hours. Our trained technicians perform the work at locations and times convenient for you. We track the machines through KOMTRAX and contact you when it’s time to schedule service. Our aim is to minimize or avoid disruption to your production.

Whether it’s Komatsu or another brand we carry, we have maintenance plans available to take care of all your machinery. We can also work on your competitive equipment. Talk to your product support representative or your branch service manager to see how we can help.

If there’s anything we can do for you, please call or stop by one of our branch locations.

Sincerely,
Modern Machinery

Brian Sheridan
President

As one might expect, Nelson started small. “I called a friend from my Alaska days, and he told me about a job. I bid on it and won, so that was my start,” he noted. “It was 1996 and in the beginning, I was a one-man-band. I was my own estimator/bidder, my own operator/laborer/mechanic and my own bookkeeper. I never had large dreams or expectations for the business. I just wanted to make a decent living doing something I liked.

“After about a year of 18-hour days and doing everything myself, I hired a truck driver and a short time later, an operator. That was difficult for me because when I did the work myself, I was in control of the final product. It was hard for me to let go and trust somebody else to work under my name, but I knew it had to be done. The business just grew from there.”

Today, Team Nelson Earthwork & Utilities, headquartered in Woodinville, Washington, approximately 20 miles northeast of Seattle, employs about 200 people and works throughout Snohomish and King Counties. The company’s specialty is land development – primarily for subdivisions, apartment complexes and commercial properties, such as strip malls and big-box stores. Team Nelson performs grading, utility and foundation work with its own employees. It is now adding concrete curb and gutter capabilities. It subs out clearing and paving.

People may not have heard of Team Nelson and wonder why. It’s probably because the original name of the company was Nelson & Sons. Nelson called it that because, although his sons at the time were very young, he thought there was a good chance they might someday join him in the business. In fact, his sons Dillon and Dalton both work for the company, but ironically, the name change to Team Nelson occurred shortly after they came onboard.
“When I started, I thought we might always be a small, mom-and-pop type of operation, exemplified by the name Nelson & Sons,” Nelson explained. “But Team Nelson better describes the larger, highly professional company we have become. It also signifies something that’s very important to me – a team-oriented approach to getting the job done. We have different crews and divisions, but we all work together toward the same goal – total customer satisfaction. I’m very proud of the overall culture we’ve developed at Team Nelson.”

Focus on customer satisfaction

Even when his company was small, Nelson says customer satisfaction was his priority. “Keep the customer happy and everything will flow from that. That customer will give you more work. He tells others or others see what you did, and they try you out. If you do well, you’ve earned another customer. That’s how we gained momentum and started to grow pretty quickly in the late ’90s and early 2000s. Frankly, at the time, I might have been growing too fast.”

“A key turning point for me was hiring Senior Estimator Eric Rathbone,” Nelson noted. “Since then, bringing on the right people in key positions has been a priority for me. Having top-notch managers and foremen has been the major factor in our success.”

In addition to Rathbone, key personnel include Operations Manager Mike Gilbert, Equipment Manager Rob Holden (who replaced Russ Paulson when he retired) and Controller Sharon Handran.

“Obviously, you don’t do it with only top managers,” Nelson added. “We believe our field personnel – foremen, operators and laborers – are all equally important. I think everybody in our group feels a responsibility to everyone else to do their jobs to the best of their abilities. That’s the ‘team’ part of Team Nelson.”

The company has a commercial division that does subdivisions and other large projects, and a residential division that digs holes for the individual houses. The Nelson Concrete division pours the footings, and yet another division, Nelson Flatwork, does patios, garages and driveways as well as curb and gutter work.

“We’re a one-stop-shop for land development,” Nelson explained. “We’ll take a project from beginning to end and self-perform most of it. Whatever we don’t do in-house, we turn over to our highly reputable subs to ensure that the owner receives a quality, turnkey project.

“That’s how we keep customers coming back to Team Nelson. We always try to do what we say. We start when we’re supposed to, we do...
the job right, and we finish on time and on budget. If things don’t go perfectly, we take responsibility and make it right.”

**Komatsu equipment: quality and value**

The recession of 2008/2009 had a significant impact on Team Nelson’s equipment fleet and philosophy.

“Like everybody else, we had to hunker down,” Nelson recalled. “We went from more than 100 people to about 30, and I sold 65 pieces of equipment to become debt-free. We’ve rebounded pretty well, but when it comes to equipment, I now look for two things: quality and value.”

That led Nelson to Komatsu machines from Modern Machinery and Sales Rep Marc Bandy. In the past year, the company has acquired five Komatsu hydraulic excavators (a PC650LC-8, a PC490LC-11, a PC240LC-11 and two PC210LC-10s); three Komatsu dozers (a D155AX-7 and two D61EXs); and a WA380 Komatsu wheel loader.

“I’ve always been a fan of Komatsu equipment,” said Nelson. “Even back when I was operating, I thought Komatsu excavators were faster and had better control than the other top brands. We also had a D65 dozer that my guys loved. It pushed and graded better than any other dozer we had. When you combine that kind of equipment quality with some of the recent financial incentives from Komatsu, such as zero-percent financing and a lease program with incredibly favorable terms, it was an easy decision for us. We just couldn’t ignore that kind of value.”

“With these new machines, I think Komatsu is now king-of-the-hill,” said Foreman Rick McGinnis. “They are smooth, powerful and reliable machines. All the guys on my crew are sold on Komatsu.”

“We’ve had good experiences with the Komatsu machines, but equally important to us is dealer support,” added Equipment Manager Rob Holden. “We count on the dealer to have parts and knowledgeable, responsive service technicians. Modern does a good job of providing the support we need. The Komatsu CARE program, where Modern takes care of the routine maintenance for three years or 2,000 hours is a significant, added bonus.”

“Team Nelson’s growth in the last five or six years has been truly impressive,” said Modern President Brian Sheridan. “We appreciate the opportunity Don has given us to work with him and his team.”

**Bright future**

Nelson has already far exceeded his initial expectations for the company, but now he says he’s considering further growth.

“We are adding some new services, and we’ll continue to seek other opportunities that make sense for us. It’s not about trying to be the biggest company around or even trying to make more money. The reason I want to continue to grow is to be able to do more for our customers and our employees. That’s the real satisfaction of having a business like this. I get to help people by providing a good job at a good wage, and I can help customers by providing them with a quality, hassle-free job at a fair price. As long as we keep doing those things, I think the future of Team Nelson Earthwork & Utilities is very bright.”
Productivity is bound by screen size.

WE DISAGREE.

The Combo® Screen combines benefits from horizontal and incline screens.
Up to 25 percent more capacity than comparable horizontal screens.
Up to 10 percent more efficient than comparable incline screens.

TOUGHNESS REFINED.
The water crisis in Flint, Michigan, may only be the tip of the proverbial iceberg when it comes to failing systems that carry the nation’s drinking water and other critical utilities. Several factors figured into the crisis, including the use of old lead pipes that brought water from the Flint River, through a water treatment plant and eventually into residences. Failure to treat the water properly caused pipes to corrode and to leach lead and heavy metal. The harmful materials made their way into homes, causing health problems that could plague Flint for a very long time. Efforts are underway to assess and eventually fix Flint’s issues, including switching the city back to its original water source, Lake Michigan, and replacing all lead service lines leading to homes. The first lead-to-copper line replacement was recently completed, but replacing all lines could take years.

Although Flint’s crisis is an isolated incident, a problem with the nation’s drinking water and other utility lines isn’t. Corrosion is a leading cause, but aging pipes and overtaxed systems may be to blame as well.

**A break every two minutes**

The American Society of Civil Engineers says that a water main breaks every two minutes in the United States. The same group has graded the country’s infrastructure a D+. Estimates show that as much as 44 percent of the nation’s water infrastructure is approaching or past its useful life, and that about 1.7 trillion gallons of water are wasted each year.

“We have a buried problem that no one sees,” said Terry Leeds, Director of Kansas City Water Services and a board member of the National Association of Clean Water Agencies in a recent Kansas City Star article. “Infrastructure has a life span, and now we’re seeing a lot of cities are facing the end of it.”

That article, “Here’s why Flint’s water problem isn’t likely to happen in Kansas City,” highlights what the Missouri city is doing to combat an aging system that saw more than 1,850 water-main breaks in 2012. It began a program to replace 28 miles of pipe per year. Many of the old lines were made of cheap metal and installed during and after World War II. Other cities are facing the same scenario of outdated systems.

**A hefty price tag**

The PVC Pipe Association sponsors WaterMainBreakClock.com, a website that tracks the costs associated with aging pipes throughout the country. It shows that about 850 water-main
has also said it will cost $385 billion in the next 15 to 20 years. Those figures include pipes that carry wastewater to treatment plants, the technology that treats water and methods of managing stormwater runoff. The EPA also calls for the investment of hundreds of millions of dollars in treatment plants, many of which are several decades old.

“The only way to have clean and reliable water is to have infrastructure that is up to the task,” said Joel Beauvais, the EPA’s Acting Deputy Assistant Administrator for Water, in a Construction Equipment article. “Our nation has made tremendous progress in modernizing our treatment plants and pipes in recent decades, but this survey tells us that a great deal of work remains.”

Many believe the price tag could be much higher. The American Water Works Association, for example, claims that $1 trillion is needed to replace outdated pipes and meet growth during the next 25 years.

“The future is looking a little dark for something as basic and fundamental as water,”
said Adam Krantz of the Water Infrastructure Network (WIN) in a San Angelo (Texas) Standard Times article. WIN is a broad-based coalition of local elected officials, drinking water and wastewater providers, state environmental and health administrators, engineers, and others dedicated to preserving and protecting the health, environmental and economic gains that America’s drinking water and wastewater infrastructure provides, according to the organization.

**Could your rates rise?**

WIN and other groups are pushing Congress to invest more. Federal funding comes from the Drinking Water State Revolving Fund that offers loans to help cities and towns get needed dollars. Cities and towns also rely on taxes, but many fall short of raising enough money to pay for needed upgrades and repairs. More efficient faucets, shower heads and other plumbing systems have made revenue shortfalls worse. Population loss, which reduces taxes, also plays a role in municipalities. That’s forcing some local governments to raise rates.

“That’s the key that Americans have to understand: If they want this system, they are going to have to be willing to finance it,” said Greg DiLoreto, Past President of the American Society of Civil Engineers in the Times article.

Fitch Ratings, a nationally recognized statistical rating organization, said that in light of the Flint crisis, if the EPA strengthens its Lead and Copper Rule – which is used to regulate drinking-water exposure to lead – the removal of all lead service lines could be mandatory. That would be an expensive proposition.

“Reprioritizing and accelerating the lead pipe replacement would add significant capital needs to the sector and could compete with other critical infrastructure projects, including developing sufficient long-term water supplies and replacing aging infrastructure components other than lead lines,” said Fitch in a March press release. “Some sources estimate more than 6 million lead service lines exist across the U.S. We believe the capital costs to replace these lines could exceed $275 billion. The EPA’s latest survey estimated the entire sector needs $385 billion in water infrastructure improvements through 2030, and this estimate includes the costs to only partially replace lead pipes. Either level of capital cost would likely be manageable for the sector as a whole if it is spread throughout a time frame like the one in the EPA survey. However, implementation across a shorter time span may create stress for individual credits.”

Representatives on both sides of the aisle in Congress have called for establishing a National Infrastructure Development Bank to help pay for the costs associated with projects such as roads, bridges and water systems that are critical to Americans, but no bill passed. A recent push came again in February from U.S. Rep. Rosa DeLauro (D-Conn.), who has introduced an act in every Congress since 1994 to create an infrastructure bank.

“Emergencies like the tragedy we are seeing in Flint are a stark reminder of what is at stake when it comes to investment in water projects,” said DeLauro in a commentary on TheHill.com. “We cannot continue the pattern of turning attention to critical infrastructure only when disaster strikes – we must make long-term, pro-growth investments to prevent further tragedies from ever occurring.”
Our country must do better than “nearly failing” when it comes to something so vital and fundamental as water. Yet a D+ is our nation’s water infrastructure grade from the American Society of Civil Engineers (ASCE). It has taken the lead-contamination scandal in Flint, Michigan, to get the attention of Congress and elected officials across the nation, but Flint is only the tip of the iceberg.

News reports now say as many as 2,000 water systems across the country may have excessive lead levels, while as many as 10 million homes receive water through lead pipes. Across the nation, many pipes are more than 100 years old, some dating back to the Civil War era, posing drinking water risks. Each year, according to ASCE, there are 240,000 water-main breaks. Faulty pipes result in the leakage of 900 billion gallons of wastewater a year, helping to make 28 percent of waterways unfit for human recreation and 18 percent unfit for consumption. According to ASCE, the cost to fix our nation’s abuse of water resources is now $1.7 trillion – and rising.

From drinking-water contamination, to water scarcity, to ports and waterways that can no longer accommodate commerce, the water crisis is one of the most critical issues facing the U.S. As Flint shows, the crisis raises moral questions, but there are major economic costs as well. Across the country, neglect of inland waterways and the associated stunting of water transportation activity could hit the economy with the loss of 738,000 jobs by 2020, a nearly $750 billion blow to the economy, according to ASCE.

America can do better than a D+. This year, Congress is likely to consider a number of water-infrastructure measures to increase funding for clean and safe drinking water, ranging from reauthorization of the Water Resources Reform and Development Act (WRRDA) to bills aimed at alleviating the drought in the West. However, we must caution Congress against “robbing Peter to pay Paul.” For the sake of our children in every community, the drinking-water crisis must receive additional, significant and dedicated resources above and apart from WRRDA. That piece of legislation is simply not capable of addressing the crisis, and attempting to use it for that purpose will only strain other critical water resources.

There is no excuse for Congress failing to act. The challenge is enormous, but the rewards can be equally as great. The men and women of the Laborers’ International Union of North America are ready to fight to protect lives, and we’re ready to get to work doing our job to rebuild America’s neglected water infrastructure. Now it’s up to Congress and elected officials at every level to do their jobs to ensure that our country and our people have what they deserve: an A+ water infrastructure.
Eliminating the need to install and remove blade-mounted sensors each day saves on machine and operator wear and tear, and it converts potential downtime into increased production. Komatsu’s second-generation D39PXi-24 and D39EXi-24 dozers offer that and more with a new Tier 4 Final engine that increases fuel efficiency compared to its predecessor.

“With factory integration and a host of intelligent capabilities, the more that owners run their D39i-24 dozers, the more they save,” said Jason Anetsberger, Komatsu Senior Product Manager. “The monthly production gains from starting sooner, finishing faster, using less fuel and saving on materials can add up quickly.

MORE INTELLIGENT DOZING

Komatsu’s new D39i-24 dozers lower fuel consumption and increase production time with no cables

Skipping the cables, climbing and connections of traditional aftermarket systems saves operators up to 30 minutes a day and is more convenient.”

Rough-cut to final grade, the intelligent Machine Control (iMC) dozers extend production gains. Once engaged, the system automatically starts the cut and lowers the blade to grade in a typical dozing pass. If the load increases to maximum capacity, the blade automatically raises to minimize track slip, ensuring productive dozing. This allows the dozer to achieve up to 8-percent-greater efficiency in moving materials, based on start-to-finish grade testing against typical aftermarket machine-control systems.

New features

Customer feedback led Komatsu to introduce a standard, operator-selectable, automatic Reverse Grading Mode, which enables automatic blade control while reversing, to grade the target surface. Other new features include a Triple Labyrinth final-drive design that provides additional protection for the final drive floating seals.

The more-efficient engine uses a Selective Catalytic Reduction System and Diesel Exhaust Fluid, as well as a new, water-cooled, Variable Flow Turbocharger that improves durability and engine response. The Diesel Oxidation Catalyst provides 100-percent passive regeneration that does not interfere with operation. Auto-idle shutdown helps reduce idle time and saves fuel.

“These dozers are great for everything from stripping to finish grading on a variety of small-to-medium-sized jobsites, such as commercial buildings and residential lots,” said Anetsberger. “As with all Tier 4 construction machines, they are covered under the Komatsu CARE program.”

Komatsu’s new D39EXi-24 and D39PXi-24 dozers lower fuel consumption with a Tier 4 Final engine. They also increase production with integrated machine control that eliminates the time needed to install and remove cables.
PUSHING AHEAD WITH *INTELLIGENT* MACHINE CONTROL

- Automated operation from rough dozing to finish grade
- *intelligent* Machine Control dozing mode and load control features
- No cables between machine and blade
- A factory-installed integrated system

“*I’m proud that our Komatsu dozer designs are always breaking new ground, like our forward cab small dozers and now our *intelligent* Machine Control equipment with integrated technology. But it’s a team effort and it takes dedicated team members to build in the quality it takes to meet our customers’ demands. And that’s why I AM KOMATSU.*”

CODY GASTON / KOMATSU DOZER DESIGN ENGINEER / CHATTANOOGA, TN

MADE WITH PASSION AND PRIDE

komatsuamerica.com

Copyright ©2019 Komatsu America Corp. All Rights Reserved.
MICHAEL THOMAS / WELDER / CHATTANOOGA, TN

"Komatsu excavators come with the latest in technology. I’m proud to be part of the production team that builds them to hold up to years of daily punishment. I make sure they’re as rugged as Komatsu’s quality reputation, because it’s not just Komatsu’s reputation on the line—it’s mine and all my friends’ too. And that’s why I AM KOMATSU.”
Contractors looking for a versatile excavator with a smaller footprint are in luck. Komatsu’s new PC30MR-5 and PC35MR-5 utility-sized excavators are a perfect fit for tight worksites.

The new models have a swing-boom design that enables them to easily complete jobs in confined spaces. The excavators are each equipped with a standard dozer blade to help with backfilling and enhanced work modes to help operators match engine speed and pump delivery to the application.

“The swing-boom design allows the machines to dig close to foundations or alongside buildings,” said Komatsu Product Marketing Manager Des Jarvis. “The PC30 and PC35’s standard dozer blade makes backfilling a breeze and eliminates the need for a second machine.”

The excavators come with a Tier 4 Final, 24-horsepower engine and an Exhaust Gas Recirculation Valve to meet emissions standards. They feature a new auto decelerator, auto-idle-shutdown and economy modes to help reduce idle time and save fuel. Additionally, a dial-type knob offers finer throttle control. The excavators are available in three track options – rubber, steel or roadliner – to further their worksite versatility.

**Upgraded comfort**

Both the PC30 and PC35 feature an updated cab to provide a durable and secure work environment. The ROPS cab and two-post canopy come equipped with a 3.5-inch, high-resolution LCD screen and Ecology Guidance to help operators monitor machine-performance metrics and maximize fuel efficiency.

Komatsu improved visibility and functionality inside the cab through several enhancements, including a swing-open hinge door. The cab has a flat rear window to increase visibility and reduce replacement costs. The two-post ROPS canopy is designed with no front posts, which can distract the operator.

Daily maintenance and service is easier on the excavators, as both the PC30 and PC35 have wide service doors for access to ground-level maintenance. The addition of a swing-up operator platform increases accessibility to all components.

INCREASE PRODUCTION WHILE LOWERING FUEL COSTS

- Komatsu SmartLoader Logic for optimal energy savings
- Large capacity torque converter with lock-up
- All-new cab for comfort and visibility
- Powerful 272 HP engine

"Komatsu loaders are tough. The loaders I assemble here in South Carolina are built to high standards. I know because my team and I meet and exceed those standards every day. Our goal is to build you a product that will handle the jobs you throw at it and keep coming back for more. And that's why I AM KOMATSU."
Demanding logging applications require machines that can withstand the rigors of daily use and consistently deliver high productivity. Komatsu’s totally new, four-model harvester family – led by its flagship 931 harvester – is doing just that.

“Our new harvester family was designed from the ground up to set the industry benchmark for productivity, operator comfort and eco-friendliness,” said Steve Yolitz, Manager, Marketing Forestry, Komatsu America. “The 931 harvester is our high-volume flagship model in the family.”

Komatsu designed the 931 harvester for serious productivity by including the new 3-Pump Hydraulic System (3PS), featuring dual circuits with separate pressure levels. The system is power-regulated against the engine and offers a class-leading working hydraulic flow of 139 gallons per minute (528 liters per minute), which is 68-percent-greater than the prior 931.1 model.

Unique pressure and flow optimization enables operators to work considerably faster without losing hydraulic power. Operators can use multiple functions simultaneously with maximum hydraulic power, such as slewing the crane, feeding a log and maneuvering the machine – all with optimally low fuel consumption.

Performance and productivity are further enhanced with the new H-series parallel crane that has greater lift capacity, 360-degree cab/crane rotation and automatic four-way cab/crane leveling, which keeps the operator on a consistent plane and ensures an unobstructed view of the tree at all times. While a variety of harvesting heads are offered to meet specific applications, the C144 model is a strong overall performer and serves the broadest market segment. It has a maximum cutting diameter of 28 inches, and the powerful four-wheel-drive feed system generates 6,650 pounds of feed force.

The larger, modern cab increases the front line-of-site visibility by 62-percent upward and 17-percent downward. Operator comfort was enhanced with an automotive-grade fit and finish interior, first-class ergonomics and adjustable hand controls.

The 931 harvester has a new 251-horsepower Tier 4 Final engine that is both powerful and more fuel efficient than prior models. A cold-weather starting system, which heats the batteries, engine coolant, diesel exhaust fluid and hydraulic oil, come standard on the harvester.

“Since the first next-gen harvesters began working in the woods last fall, every indication is that we have achieved our productivity, operator comfort and eco-friendliness goals,” stated Yolitz. “The 931 harvester is proving to be an outright winner.”
I AM KOMATSU

Abe Riddle / Director of Parts Operations / Ripley, TN

650,000 SQ/FT PARTS WAREHOUSE

“When you need a part, any part, you need it now—and you need it right. I understand that. Our modern 650,000 sq/ft facility centrally located in the U.S.A. is open 24/7 and ships Same Day if needed. That’s why I’m proud to be part of the Komatsu team. My team! We will do whatever it takes to keep you up and running. And that’s why I AM KOMATSU.”

komatsuamerica.com
QUESTION: What is the role of Komatsu’s Ripley Parts Operation in Tennessee?

ANSWER: It is the central parts warehouse for North America and Latin America, with an emphasis on parts for Komatsu construction, forestry, forklift and industrial press products. We also carry parts for what we call “mining support,” which is inventory related to non-electric-drive trucks.

Everything – O-rings, engines, transmissions and some boom-assembly parts – comes through here and is shipped to our distributors or one of our eight regional parts distribution hubs located in the United States and Canada. We serve Komatsu affiliates globally, too, but our primary customer base is in North American and Latin American countries.

Our most important role is ensuring those parts arrive in a timely manner. The Parts Operation Department runs two shifts per day, but we’re really a 24/7/365 operation. We have a hotline number (731-635-6120) and staff on-call, so even if customers call during holidays or off hours, we can still process their orders and get them shipped. It’s our goal to have most parts orders in customers’ hands the same day or the next day.

QUESTION: Why is that important?

ANSWER: When machines are down, customers are losing money. We understand that, so our response is critical. The faster they get the parts, the faster they can be back up and running. Many customers tell me that service after the sale is a huge factor in what brand of equipment they choose, so we obviously place a heavy emphasis on timely parts support.

Abe Riddle says the aim of Komatsu’s Ripley Parts Operation is timely delivery from its vast inventory
Location is key for Ripley Parts Operation in Tennessee

... continued

QUESTION: Why is Ripley, Tennessee, a good location?

ANSWER: We are strategically located close to a major freight hub in Memphis. That allows us to take orders late in the day and still be able to get parts where they need to be early the next day, in most cases. For example, if someone in Washington state places an order at 6 p.m., they will have it around 10 a.m., depending on what they ordered.

QUESTION: How likely is it that you will have the parts on hand that customers need?

ANSWER: Highly likely as we carry about $560 million in inventory. Our target is 95-percent availability, meaning that when an order is placed, we have what’s needed on the shelf and ready to go. Currently we are at 96.4 percent.

QUESTION: How do you know what inventory to have on hand?

ANSWER: There are several factors we take into account. We consider historical demand, and we collaborate with distributors to understand their operations and machine populations. We also use KOMTRAX to monitor data that helps us anticipate future parts needs. In addition, our manufacturing plants give us recommended lists of parts for new machines. All of that information helps us get a strong hold on what we need to build inventory and keep parts stocked at appropriate levels.

QUESTION: What about older machines?

ANSWER: We maintain a good deal of inventory for machines dating back a decade or more, so we likely have the needed parts on hand. If we don’t, we can source parts from trusted suppliers. We will do everything we can to make sure customers get what they need.

General Manager, Ripley Parts Operation (RPO), Abe Riddle says the RPO's most important role is ensuring that parts arrive in a timely manner. With nearly 97-percent availability, most orders are filled within 24 hours.

Komatsu's Ripley Parts Operation (RPO) is the central parts warehouse for North America and Latin America. Its inventory includes items for construction, forestry, industrial press and mining support. It also includes parts for Komatsu forklifts, like the one pictured here, which RPO personnel use at the warehouse.
Komatsu CARE in 2011 with one goal in mind: demonstrate the company’s commitment to delivering quality parts and reliable service in a manner that ensures a customer’s machine performance is never compromised. That goal has been accomplished – 60,000 times. Columbus Equipment Company (CEC), the Komatsu distributor in Ohio, performed the 60,000th Komatsu CARE service interval on a D61EXi-23 dozer for Eramo & Sons in late March.

“We’re very honored to participate in Komatsu CARE and to have completed the 60,000th service,” said CEC President Josh Stivison. “We’re also proud to conduct the service for Eramo & Sons, a company we have a rich history with.”

CEC completed the milestone service interval during a ceremony at its Columbus, Ohio, facility and presented Eramo & Sons with a certificate to celebrate the event.

“Through Komatsu CARE, we can make sure our customers’ Tier 4 machines are maintained properly,” said Komatsu Director of Distributor Development Mike Hayes. “Komatsu CARE secures uptime, increases productivity and protects residual values for the machines. It also keeps service technicians familiar with the customer’s equipment, which is great for future maintenance. The service is complimentary, and we contact customers to schedule the maintenance at a convenient time and jobsite location. This way, the customers save time and money and can schedule their maintenance downtime.”

The Komatsu CARE complimentary maintenance program provides service on Tier 4, construction-sized machines – whether rented, leased or purchased – for the first three years or 2,000 hours of operation. The program includes scheduled factory maintenance, a 50-point inspection at each service interval and two Komatsu Diesel Particulate Filter exchanges within the first five years. Komatsu distributors monitor the machines and contact owners when a service is due. Then, a Komatsu CARE-certified service technician performs the maintenance.

Today, Komatsu CARE programs are standard on all Tier 4 and Tier 4 Final machines in the United States and Canada. The program has been a huge success with customers, including Eramo & Sons.

“Komatsu CARE saves us a lot of labor,” said Eramo & Sons Chief Mechanic Dave Penwell. “It also keeps me more involved with the service department at the distributorship. Overall, it makes my job easier. They take care of everything.”

“We began using Komatsu equipment in the 1970s; it was a decision that has served us well,” added Chairman Rocky Eramo. “Komatsu makes an excellent product, and our distributor has always been there to help us. Today, we have about 45 Komatsu machines in our fleet. It’s been a great partnership.”

Officials from Komatsu and Columbus Equipment Company (CEC) present Eramo & Sons’ representatives with a certificate to celebrate the 60,000th Komatsu CARE service interval. CEC completed the milestone service on Eramo & Sons’ D61EXi-23 dozer in late March.
Nearly 230 current and prospective customers attended Komatsu’s spring Demo Days at its Training and Demonstration Center in Cartersville, Georgia, in February. The three-day event opened with a single-day record number of attendees. Those in attendance got an early look at the latest additions to the Komatsu intelligent Machine Control (iMC) line – the PC490LCi-11 excavator and the D155AXi-8 remote-control dozer.

“Demo Days is a great opportunity for customers to come and operate our machines and get a first-hand feel for them,” said Komatsu Director of Marketing Communications Bob Post. “While the event served as a debut for the PC490LCi and the D155AXi with remote control, our other Tier 4 machines that were featured were also a big hit.”

Komatsu had 31 machines available for operation at Demo Days. In addition to the highly anticipated PC490LCi-11 – the world’s largest excavator with integrated GPS technology – several iMC products were also on display, including three PC210LCi-10 excavators and D51PXi-23, D61PXi-23 and D65PXi-18 dozers.

The line up also featured six wheel loaders (sizes WA200-7 to WA600-8), four dozers (sizes D39PX-24 to D85EX-18), multiple excavators (sizes PC88MR-10 to PC490LC-11), an HM400-5 articulated truck, an HD605-7 mechanical truck and a GD655-6 motor grader.

During the event, attendees had the option of touring Komatsu’s Chattanooga Manufacturing Operations Center in Tennessee or attending morning information sessions at the Training and Demonstration Center in Cartersville. The sessions included “Bottom Line Tactics” and a tire-management class. Presentations covering Komatsu’s iMC products and Komatsu Financial followed a catered lunch. After a short safety video and product demonstration, guests had the opportunity to operate machines.
Komatsu has teamed up with Extreme Sandbox, LLC, a top-rated, heavy-equipment-adventure company, to become its exclusive equipment sponsor. The partnership enables both companies to expose more Americans to the experience of operating heavy equipment.

Extreme Sandbox provides guests with a truly unique opportunity to operate real construction equipment inside a 10-acre “sandbox.” Expert instructors help guests learn and operate the machines in a proper operating environment, while creating a fun and memorable experience.

Together, the two companies plan to expand the public’s exposure to heavy machinery. By combining Extreme Sandbox’s national expansion plans and proven track record of creating memorable experiences, with Komatsu’s world-class machines, national reach and global resources, the partnership will introduce a new generation to heavy machinery and an under-explored area for rewarding careers.

“This alliance is an opportunity to transform these impressive marvels of engineering technology from a roadside and work-zone curiosity, to an informative, exciting, hands-on experience,” said Rich Smith, Vice President, Product Services Division for Komatsu America. “Long term, we hope climbing inside and feeling the comfort, speed and power of these machines inspires a new generation of men and women who are good with their hands to consider construction careers. The construction industry provides great employment opportunities for future operators, technicians and engineers. The degree to which cutting-edge technology will shape the jobsites and careers in the construction industry of the future is a well-kept secret. We want to change that.”

Extreme Sandbox currently has two locations: its Trip-Advisor-No. 1-rated suburban Minneapolis site and its new one about an hour north of Dallas. More sites are planned for several U.S. cities in the next few years. Permanent locations will offer the opportunity to schedule machine and operator training at the high school and community college levels, as well as demonstration and customer appreciation events for local Komatsu distributors.

It will also allow Extreme Sandbox to collaborate with local distributors and embark on periodic road tours that spread the message of a thrilling experience and rewarding careers to local communities across the country, via tailgating events, state fairs, festivals, parades and other avenues.

Komatsu teamed up with Extreme Sandbox to become its exclusive equipment sponsor. The partnership enables both companies to expose more Americans to the experience of operating heavy equipment. IN THE SPOTLIGHT

Komatsu displays WA500-7 Yard Loader arrangement at record-setting asphalt, aggregate events

The co-located 2016 World of Asphalt Show & Conference and AGG1 Academy & Expo set new attendance records with more than 9,000 people checking out the exhibits inside the Music City Center in Nashville. Komatsu was among the exhibitors, displaying a 353-horsepower WA500-7 Yard Loader arrangement that is designed to load 24-ton on-highway trucks in two passes.

“Loading trucks in fewer passes increases production, and that’s just one advantage the WA500-7 Yard Loader arrangement presents,” said Rob Warden, Komatsu National Account Manager. “It’s great for moving and stockpiling already-processed materials.”

The 79,000-pound-plus loader that Komatsu displayed features a 9.8-cubic-yard, flat-floor bucket, which increases capacity and productivity for applications involving re-handled or loose materials. Komatsu added a larger-diameter bucket cylinder to the WA500-7 Yard Loader arrangement for increased bucket forces and additional counterweight for better stability and tipping loads. The counterweight’s unique shape provides more ground clearance for stockpiling materials.

The machine has 29-inch rims and low-profile tires for increased stability; front and rear brake-cooling systems, which maximize brake life in extended-carry and high-speed applications; and full rear fenders for enhanced protection from debris and thrown material.

“The WA500-7 Yard Loader arrangement handles loose stone, sand, gravel and other materials very well downstream from a crusher,” said Joe Sollitt, Komatsu Product Marketing Manager. “It fits perfectly into the asphalt and aggregate industries.”

All 50 states represented

Attendees of every state, nine Canadian provinces and more than 60 other countries made their way to the events, which covered a record 157,000 net square feet of exhibit space. The shows featured more than 500 exhibitors, including 150 new ones.

World of Asphalt and AGG1 will be held again March 6-8, 2018, in Houston. The annual shows will skip next year due to CONEXPO-CON/AGG.
The Wirtgen Group owes its strength to the excellence of its three road technology product brands – Wirtgen, Vögele and Hamm – with their unique wealth of experience.

Put your trust in the Wirtgen Group team.
Construction employment reached its highest level in six years, while the number of unemployed workers with construction experience shrank to a 14-year low, according to an Associated General Contractors of America (AGC) analysis. The organization tempered the good news, cautioning that the diminishing pool of available, qualified labor may have an impact on the industry’s ability to meet growing demand.

“It is encouraging to see construction employment rising again, but the industry could hire many more workers if they were available,” said Ken Simonson, AGC’s Chief Economist. “The lack of experienced construction workers may be impeding the industry’s ability to start or complete projects. The recent acceleration in construction spending may soon level off unless the sector can draw in more workers with the right skills.”

Construction employment totaled more than 6.3 million in July 2015, the most since February 2009, but the total rose by only 6,000 in July and by an average of only 7,200 per month during the previous five months, Simonson noted. The number of unemployed workers who reported last working in construction totaled 474,000, the fewest since 2001.

“The sector’s job gains in the past five months have been intermittent and relatively sluggish despite signs of accelerating demand for construction,” Simonson said. “The latest Census Bureau data show the amount of construction spending is rising at the fastest rate since 2006. There are several indicators – such as the steady increase in hiring of architects and engineers – that suggest demand for construction will remain strong, but contractors may have difficulty finding enough workers to take on all those projects.”

AGC officials said that a number of factors are contributing to the shrinking pool of available labor, including the fact that many aging workers are retiring, while other workers who lost their jobs during the downturn left the industry for other sectors. Officials added that the lack of high school-level programs that expose students to construction as a potential career path means fewer graduates are pursuing careers in the construction industry.

“We are doing many students a real disservice by not telling them how they can make a good living working in construction,” said Stephen E. Sandherr, AGC’s CEO, noting that its Workforce Development Plan calls for increasing the number of career and technical education programs nationwide. “The more options we give students, the more likely they are to succeed.”
IEA expects oil prices to stay low throughout 2016

The International Energy Agency (IEA) expects oil prices to stay low throughout 2016 as oversupply continues. In its Medium-Term Oil Market Report, the IEA said supply will outpace demand by up to 1.1 million barrels per day.

“Only in 2017 will we finally see oil supply and demand align, but the enormous stocks being accumulated will act as a dampener on the pace of recovery in oil prices when the market, having balanced, starts to draw down those stocks,” according to the report.

Pipeline groups pursue inspector certification

Pipeline industry groups announced support for certification of all pipeline inspectors during the next two years. The groups note that standardized certification would improve the quality of new construction.

“Safe pipeline construction and quality materials help ensure safe operation,” said Donald Santa, President and CEO of the Interstate Natural Gas Association of America. “Having certified inspectors helps everyone raise the bar.”
